**Forensic
Engineering
& Analysis**

**Expert Witness
Services**

When failures or accidents occur, causation can be complicated and influenced by myriad factors. These incidents result in insurance claims and lawsuits. Having reliable and trustworthy expertise is critical.

Providing Accurate, Truthful *and* Impactful Analysis

Formed in 1984, Design Engineering, Inc. (DEI) is committed to providing top-quality professional services for our clients.

DEI's expertise ranges from hydraulics, hydrology, structural engineering, wastewater engineering, historic redevelopment, and everything in between. Dr. Jim Martin and the DEI team are court-recognized experts in hydraulics, hydrology, sewerage, and water. We are licensed professional engineers with extensive industrial, commercial, design, construction, and failure analysis experience.

DEI has the skills and experience to quickly and accurately investigate and assess infrastructure failures.

DEI consults and provides litigation support on engineering and related issues in advance of litigation, through deposition, and in court. DEI provides accurate, truthful, and impactful analysis.

You can count on DEI for timely delivery, clear communications and scientifically accurate answers to extremely complex, and often confidential, questions. We have the expertise to determine the cause, scope, and value from minor damages to considerable losses.

DEI consults with law firms, insurance providers, construction professionals, and facility owners to discuss design failures and construction defects. DEI conducts investigations for residential, commercial and industrial facilities (public and private). We investigate, report, and provide expert analysis, opinions, and testimony. Please contact DEI for an initial assessment.
